

How to use a glove for safer sex

1. You and your partner/s both agree to have sex and use gloves to protect yourselves from STIs.

2. Grab a pair of gloves and put them on. Check they fit correctly, and aren't damaged or torn.

3. Use gloves during sexual activity that include hands. This could include things like fingering, hand jobs, or when stimulating another body part with your hands.

4. Throw the glove in the bin. Like condoms and dental dams, gloves need to be thrown out after use.

Note: Purchase latex free gloves if you have/partner has a latex allergy.
